CHICAGO, December 1st, 1888.

GENTLEMEN:

This Catalogue speaks for itself as to our rapidly enlarging line of the finest goods.

The Niles' Lock and Knob now stands recognized as a permanent and valuable improvement.

We propose to be in the front rank in workmanship and finish.

We are prepared to make special designs or to adapt designs to special buildings.

Truly,

EXPLANATORY.

PLEASE note our plan of numbering the Knobs found on the following pages. We use *invariably* elongated Escutcheons, and the numbers of Knobs are so arranged as to show what size of Lock they will fit. For all ordinary inside door Knobs we use numbers from 30 to 199 inclusive. All Knobs for $3\frac{1}{2}$ inch Locks have Whole Numbers, as, for example, a Mineral Knob with Japanned rose to fit all $3\frac{1}{2}$ inch Locks is numbered 30. The same Knob with Japanned rose to fit all $4\frac{1}{4}$ inch and $4\frac{1}{2}$ inch Locks is numbered 030; while the same Knob with Japanned rose for *Latches* is numbered 0030. Thus it will be seen that the base number for all inside Knobs is that for $3\frac{1}{2}$ inch Locks, Knobs for $4\frac{1}{4}$ and $4\frac{1}{2}$ inch Locks prefixing "0," and those for Latches prefixing "00."

Knobs for $4\frac{3}{4}$ inch Front Door Locks are in 200 series.

Knobs for 6 inch Front Door Locks are in 300 series.

Knobs for $7\frac{3}{4}$ inch Front Door Locks are in 400 series.

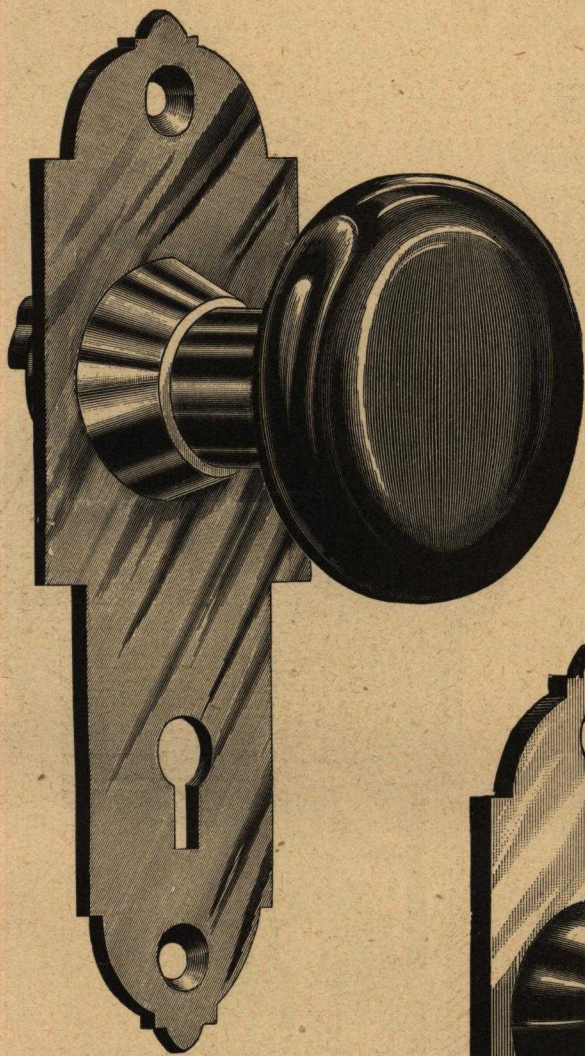

SOCKET FOR DUMB KNOBS.

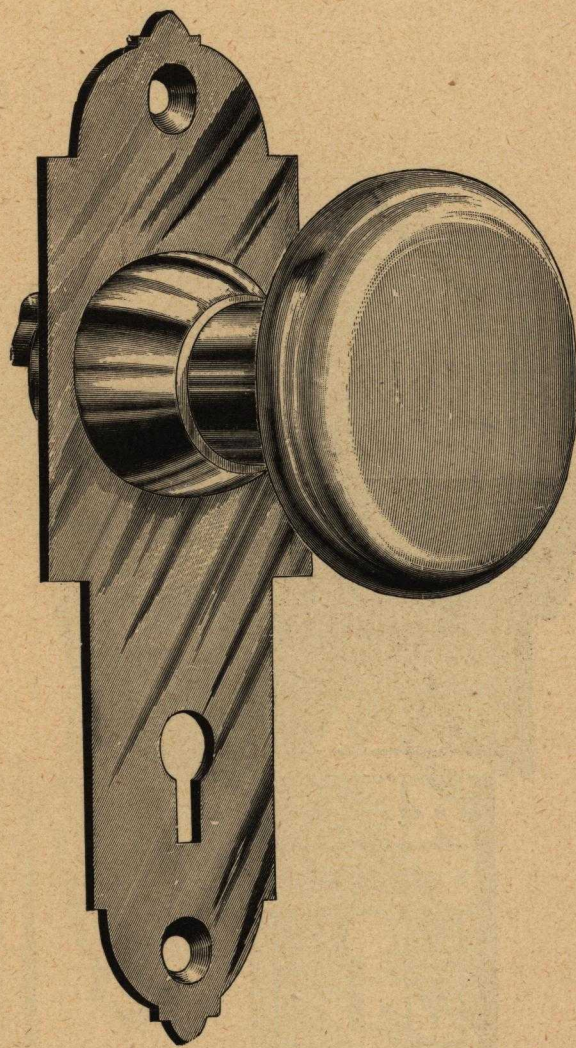

In cases where double doors are used, and Dumb Knobs are required, we furnish, without extra charge, Dumb Sockets for attaching the Knobs. The cut above shows the construction of this Socket. WOOD KNOBS.

INSTRUCTIONS FOR ORDERING.

Numbers for Wood Knobs are made by using the *Bronze Knob number* of any particular design, and adding to it the name and shape of the Wood Knob wanted. For instance: an Apple Knob, regular shape, with Rose, illustrated on page 100, would be for Latches **0037 Apple**; for $3\frac{1}{2}$ inch Locks **37 Apple**, and for $4\frac{1}{4}$ inch Locks **037 Apple**. An Apple Knob, round, would be **0037 Apple Round**, etc. An Apple Knob, ball shaped, would be **0037 Apple Ball**, etc. Another example: Rose illustrated on page 178, with Mahogany Ball Knob, for $4\frac{1}{2}$ inch Lock, would be **082 Mahogany Ball**, etc.

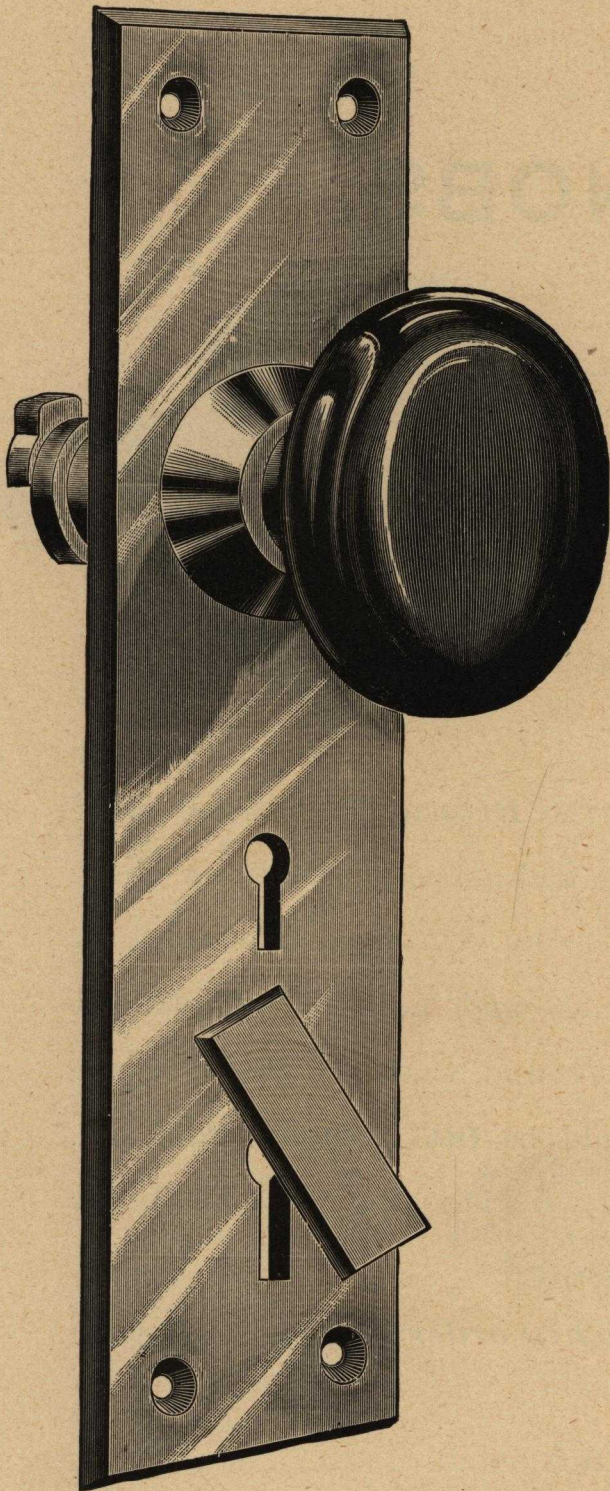

Be particular to state the shape wanted when ordering. If no shape is mentioned Regular Knobs will be sent.

Our Price List gives numbers and prices in full detail.

THE CHAMPION

DOUBLE ACTING SPRING HINGES.

This hinge has merits which give it decided advantages over other makes for *heavy, every day work.*

- 1st. It is as strong as any butt and will hold the *heaviest* door in place *without a particle of sagging.*
- 2d. It is compact, simple and not easily broken.
- 3d. It is both right and left hand, and single as well as double acting.
- 4th. It is reasonable in price.

THE IMPROVED CHAMPION HINGE.

FOR HEAVY DOORS.

No. 40. ACTUAL SIZE.

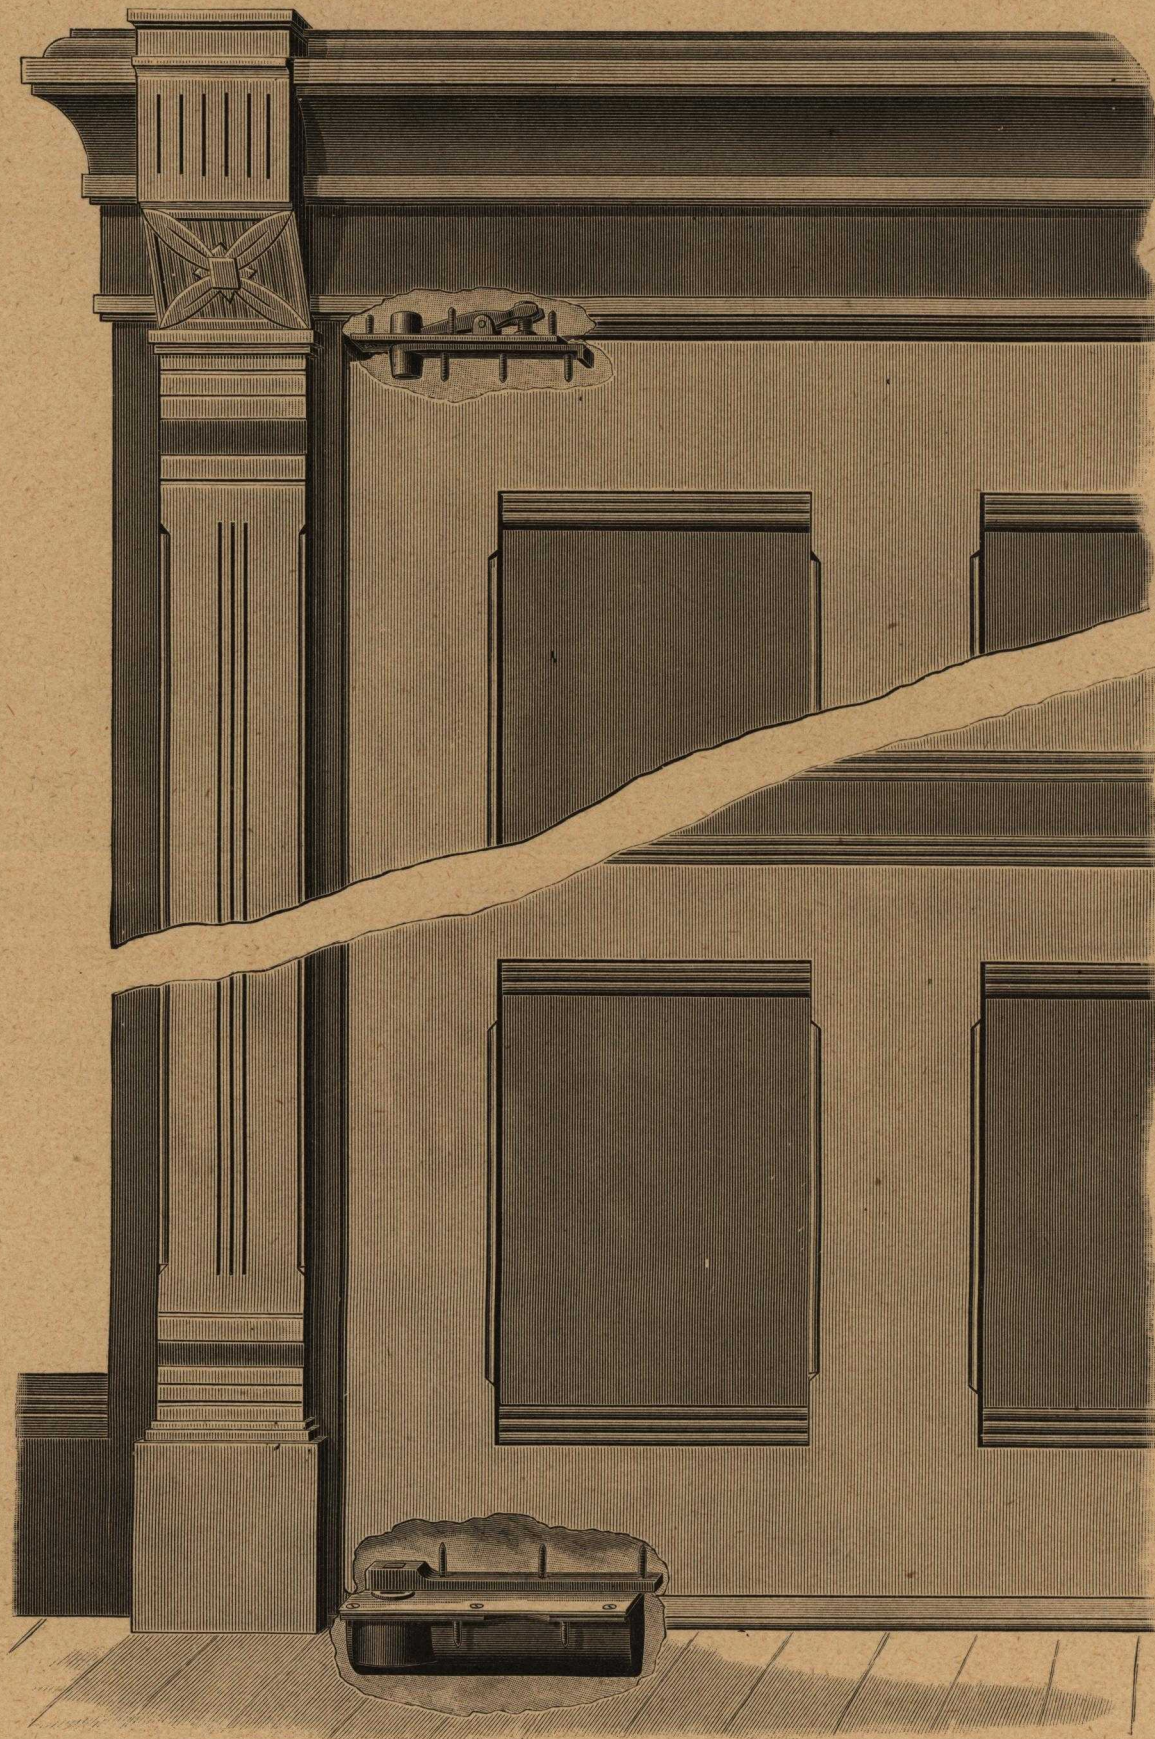

As will be seen by the illustration above, we have made an exceedingly valuable improvement by connecting the two end lugs, thus removing any difficulty in putting these hinges on the door. Each half pair is now complete in one piece and the fitting is perfectly easy.

BARDSLEY'S PATENT CHECKING SPRING HINGES.

For description see opposite page.

DOUBLE ACTING, CHECKING SPRING HINGES.

BARDSLEY'S PATENT.

SEE ILLUSTRATION ON OPPOSITE PAGE.

This Hinge combines a thoroughly practical Double Acting Spring Hinge with a device that *Checks the Door at Centre* and is, therefore, one of the most complete appliances ever offered to the Trade. The door in closing swings easily, slows when nearing the centre, and stops at once in its proper position. The great liability to accidents from violently swinging doors, where the old style of hinges are used, is entirely overcome. There is only one spring used, and this is submerged in oil and compressed, not twisted, therefore the liability of breaking is reduced to a minimum, or, indeed, entirely overcome. The mechanism is exceedingly simple and compact, and is all contained in a closed cylindrical iron casing which is let into the floor, or sill beneath the door, the upper surface being covered with a brass plate. The door and frame are not disfigured by cutting away, or by unsightly projections. The casing is filled with a specially prepared oil, which is non-freezing, and which serves both as check and lubricant, and as the casing is practically air-tight, there is little evaporation, and dust and dirt are excluded. The working parts are of steel, and as they are submerged in the oil the wear is imperceptible. The mechanism is so contrived that the greatest pressure of the spring is applied when the door is closed, and the closing speed is controlled by a screw operated from the surface, this screw regulating the size of the aperture through which the oil is forced; after once adjusting this needs no further attention, not requiring to be constantly changed as in the air checks. This screw hole also serves as a means for refilling with the oil when required.
